

A great way to get acquainted with our paints and fill in your stock with colors! Different sets over various temperature ranges to provide all sorts of painting possibilities - and a real savings over purchasing individually.

Een geweldige manier om onze verven te proberen en uw voorraad in te vullen! Verschillende sets voor diverse toepassingen en temperaturen - een grote besparing van een aparte aanschaf.

Low temperature transparent paints - perfect for painting flora, oceans, just about anything. Give your painting that extra zing! These high-quality paints are made in Europe. Four colors, 50 g of each color; and 100 ml of Sir Pete Paint Medium. Let op! - the red and purple require sufficient oxygen when firing to fully develop their color. The red is a warm red, that tends to yellow-orangey tones when applied thinly.

Sir Pete Paint Medium is a water-friendly glycerol-based medium. You can mix your paints with it full strength to achieve water-color effects, or add a drop or two in your usual paint mixture for more flow. Can be diluted with water. Fires at 550 - 610 C / 1022-1130 F to a glossy finish.

Zing! Transparent Colors

€105
